

Program Development, Implementation, and Evaluation

JAN FIELDS AIR PREP COURSE MARCH 09, 2017 Provided by the Michigan Society for Respiratory Care

The problem of chronic illness

133 million American live with at least one chronic illness outcomes disparities behaviors policy measurement innovation environment opportunity COPD prevention epidemic cancer prevalence life-course diabetes troke preservation health genetics behaviors intervention opportunity collaboration determinants innovation

Causes 7 in 10 deaths each year in the United States More than 75% of health care costs are due to chronic conditions

The problem of chronic illness

"...it is not a question of knowing how to treat heart disease, diabetes or mental illness...we know how. We're just not doing it. People are literally dying, waiting for the practice of medicine to catch up with medical knowledge. More than 57,000 people will die this year because there is a huge gap between what we know and what we do." Margaret O'Kane (2003)

Our understanding of the pathogenesis of asthma has improved

Our understanding of the steps to control asthma has improved

FIGURE: STEPWISE APPROACH TO ASTHMA TREATMENT⁹

Key: Alphabetical order is used when more than 1 treatment option is listed within either preferred or alternative therapy. ElS = exercise-induced bronchospasm; ICS = inhaled corticosteroid; LABA = long-acting inhaled beta,-agonist; LTRA = leukotriene-receptor antagonist; SABA = inhaled short-acting beta,-agonist

The asthma care paradox

Our understanding of the pathogenesis of asthma has improved

Our understanding of the steps to control asthma has improved Morbidity and mortality from asthma around the world is still high

The asthma care paradox

Asthma Period Prevalence and Current Asthma Prevalence: United States, 1980-2010

Two possible explanations

Not recognizing the symptoms and/or seriousness of asthma

Two possible explanations

There is a breakdown in either the delivery or the receiving of therapy

Two possible solutions

Chronic Care Model

Patient-Centered Medical Home

Two possible solutions

A PCMH is a smaller version of the ACO – a primary physician strives to provide patients with better coordination of care, access to services, prevention, quality and safety within the practice

An ACO is larger and can serve a larger population of people- it looks to have multiple primary care providers and practices work together. In essence, an ACO is like a PCMH "neighborhood."

Generic Asthma Plan - to be adjusted for local and national needs

promote health, support people with asthma!

compared with 1 in 14 (about 20 million, or 7%) in 2001.

Child and Adult Current Asthma Prevalence by Age and Sex: United States, 2006-2010

Among children aged 0-14, boys were more likely than girls to have asthma. Boys and girls aged 15-17 years had asthma at the same rate. Among adults women were more likely than men to have asthma.

Demographics Risk stratification Use of controller medications Use of an asthma action plan Use of the asthma control test Number of physician visits per year

Needs assessment Healthcare Resources

Primary care providers Specialty care providers Hospitals Pharmacists Community resources Case managers Social workers Schools/school nurses Family members Other ancillary services

Findings become objectives

Outcomes indicators become outcomes objectives

Data about the asthma population become learning objectives

Data about the healthcare community become resource objectives

B. Program Development				1	5
1.	Identify resources e.g.,				
	funding				
	facilities				
	personnel				
2.	Prioritize program features based on resources and characteristics of the target population (e.g., asthma				
	severity, risk factors)				
3.	Compare evidence-based solutions to program needs				
4.	Create goals of program and specific objectives to meet those goals				
5.	Select teaching methods and settings that will best meet objectives for the target population

Program development Identify resources--Personnel

Asthma Case Management Team:

- CHAP Clinical Manager / ANWM Manager
- 2 Asthma Educators/Case Managers must be Certified Asthma Educator (AE-C) – RN or RRT – or become certified within one year (bilingual preferred)
- LMSW (Masters-prepared social worker)
- 2 Community Health Workers (CHW)
 - .75 FTE combined

Program development Prioritize program features

Asthma Team Competencies

Office based training – PFT, ACT, AAP, etc Home based disease management Care coordination, including non-asthma issues Social support, environmental assessment Smoking cessation Asthma education Family/parent relationships

Using the chronic care model as a blueprint, evidence-based solutions can be applied at the system level, provider level, and patient level

CHAP Strategies: System Level

- · Integration of transition of care with inpatient setting
- Incentive Based opportuniities
 - performance-based incentive
- Standardization of care with hospitals, schools, etc
- Connection to Community Programs
 - Partnership with ANWM
 - Connection with other community providers (maternal/infant health, Healthy Homes, behavioral health, basic needs, etc.)

CHAP Strategies:

Provider Level

Medical Management

- Asthma Care Team standardize asthma care and quality measures for CHAP sites, inpatients and schools
- Education of high ED/IP utilizers
- Sharing Best Practices and Physician Leadership
 - Quarterly physician meetings, monthly practice manager meetings
 - Asthma Care Team meetings
 - Office site asthma care profile and office based outcomes
 - Provider education
 - Quality improvement support

growing every child's potential Children's Healthcare Access Program Helen DeVos children's hospital

CHAP Strategies:

Family Level

- Appropriate Resource Utilization
 - Parent education re:
 - · Inappropriate ED use
 - · Importance of medical home and how to contact PCP
 - No shows

growing every child's potential

Children's Healthcare Access Program

- · Importance of immunizations and well-child visits
- Intensive asthma education and home-based case management

Helen DeVos

children's hospital

- Resource coordination/referral to community services
- Free same-day/next-day transportation
- Assistance with interpretation services

Components of Severity		Classification of Asthma Severity ≥12 years of age				
			Persistent			
			Mild	Moderate	Severe	
	Symptoms	≤2 days/week	>2 days/week but not daily	Daily	Throughout the day	
	Nighttime awakenings	≤2x/month	3-4x/month	>1x/week but not nightly	Often 7x/week	
Impairment Normal FEV ₁ /FVC: 8–19 yr 85% 20 –39 yr 80% 40 –59 yr 75% 60 –80 yr 70%	Short-acting peta ₂ -agonist use for ymptom control (not prevention of EIB)	≤2 days/week	>2 days/week but not daily, and not more than 1x on any day	Daily	Several times per day	
	Interference with normal activity	None	Minor limitation	Some limitation	Extremely limited	
	Lung function	 Normal FEV₁ between exacerbations 				
		 FEV, >80% predicted 	 FEV, >80% predicted 	 FEV, >60% but <80% predicted 	 FEV, <60% predicted 	
		FEV ₁ /FVC normal	FEV ₁ /FVC normal	FEV,/FVC reduced 5%	 FEV₁/FVC reduced >5% 	
	Evacarbations	0–1/year (see note)	≥2/year (see note)			
Risk	Exacerbations requiring oral systemic corticosteroids	Consider severity and interval since last exacerbation. Frequency and severity may fluctuate over time for patients in any severity category.				
		Relative annual risk of exacerbations may be related to FEV ₁ .				
for Initiating Treatment				Step 3	Step 4 or 5	
		Step 1 Step 2		and consider short course of oral systemic corticosteroids		
(See figure 4-5 for	treatment steps.)	In 2–6 weeks, evaluate level of asthma control that is achieved and adjust therapy accordingly.				

Impairment Normal FEV ₁ /FVC: 8–19 yr 85% 20 –39 yr 80% 40 –59 yr 75% 60 –80 yr 70%	 Prevent chronic and troublesome symptoms Require infrequent use of inhaled short-acting beta2-agonist Maintain (near) normal pulmonary function Maintain normal activity levels Meet patients' and families' satisfaction with asthma care
---	--

Risk

- Prevent recurrent exacerbations of asthma
- Prevent progressive loss of lung function
- Provide optimal pharmacotherapy with minimal or no adverse effects

CHAP Asthma Program Goals:

- Identify and address systems barriers that prevent CHAP patients from optimally managing asthma
- Increase access to and coordination of asthma services for children on Medicaid
- Standardize asthma management in Kent County
- Reduce emergency department use and hospitalizations related to asthma among target population

Program development Select program activities

Teaching methods include

- Private sessions vs. group sessions
- Caregiver education vs. patient education
- Demonstration and return demonstration
- Education materials

Program development Select program activities

Teaching settings include

- clinic/office-based education
- emergency department/hospital-based education
- educational interventions by pharmacists
- educational interventions in school settings
- community-based interventions
- home-based interventions

C. Program Implementation		1	1	0	2
 Ensure safety and privacy of individual 	als with asthma e.g., x HIPAA x OSHA x infection control				
2. Maintain a program database					
Coordinate training for program staf					

Program Implementation

Program implementation

Program implementation Training program staff—AE-C

 The following U.S.* currently licensed or credentialed health care professionals may be admitted to the examination:

Physicians (MD, DO) Physician Assistants (PA-C) Nurses (RN, LPN, NP) Respiratory Therapists (RRT, CRT) Pulmonary Function Technologists (CPFT, RPFT) Pharmacists (RPh) Social Workers (CSW) Health Educators (CHES) Physical Therapist (PT) Occupational Therapist (OT)

 Individuals providing direct patient asthma education, counseling or coordinating services with a minimum of 1000 hours experience in these activities.

Program implementation Training program staff--CHWs

Training:

- Minimum of 2 days of experiential learning (job shadowing by discipline) in Kent County
- 1 2 days of observation on-site
- · Min. 6 hours of didactic training
 - Guideline-based asthma management
 - Home visit basics
 - Educational content
 - Educational strategies/role playing
 - Social work role/services

Children's Healthcare Access Program

Quality Observatory

Most recent 12 months to December 2015

Asthma CCG Level Snapshot

Note varying y-axis scales

East Midlands Respiratory Programme

 Demographics: name, DOB, address, phone number, name of parent/guardian (if child), race/ethnicity, insurance status, household income, family size, zip code, address and phone number, medical home (and specialist), language spoken, other family members (names and ages)

- Date of home visit
- Who is present at home visit client, mother, father, guardian, LMSW, CHW, interpreter, case manager
- Number of visit
- Type of visit home visit, care conference, school visit
- Who made the visit AE-C, LMSW, CHW
- · Visit accomplished or no-show?
- · Mode of transportation for family
- · Marital status (of patient or parent/guardian)
- · Employment status (of patient or parent/guardian)
- Referral source
- Reason for referral
- · Engaged in behavioral health?
- · Coordination with Dept. of Social Services?

- · Asthma symptoms nasal congestion, watery eyes, coughing, SOB, wheezing, chest tightness, other symptoms
- Symptom frequency # days/week, # nights/week

Asthma trigger exposures – smoke, cold air, mold, dust, pollen, grass, trees, dogs, cats, birds, foods, GERD, ASA, NSAID, odors/fumes, respiratory infections, weather changes, roaches, other known triggers

- Education sessions A&P/goals, EIA, PF/symptom monitoring, triggers, meds/devices, AAP
- · Provide: spacer, pillow cover, PF meter, written information, other
- Plan arrange care conference, refer to Healthy Homes, refer to ANWM LMSW, administer juniper to patient/caregiver
- Reason for discharge declined services, graduated, lost eligibility, non-compliant, safety concerns, unable to contact

- · The following are tracked on enrollment and discharge (pre/post):
 - ACT score
 - Juniper score
 - Flu shot yes/no
 - Asthma Action Plan yes/no, understands AAP
 - Spirometry yes/no
 - o Smoke exposure? Inside or out?
 - o # School days missed due to asthma
 - # Unscheduled office visits
 - o # Parental work days missed due to asthma
 - # ED visits due to asthma
 - # Hospitalizations due to asthma
 - # Steroid bursts

- # Days/week with symptoms
- o # Nights/week with symptoms
- Allergy testing
- o Exercises without symptoms
- Seeing specialist
- o Monitors peak flow

Outcome Dashboards:

Process measures

- · 2 asthma visits/yr
- Annual spirometry (>5 years old)
- Annual flu shots
- Asthma Action Plan (AAP) use
- ACT use
- ETS exposure documentation
- Use of long-term control medications adherence to regimen

Outcome Dashboards:

Outcome Measures and goals

- ED/1000
- Asthma ED visits/1000
- IP/1000
- HEDIS measures at 90%
- Cost per patient

CDC recommends a yearly flu vaccine for everyone six months of age and older

What Does the Research Say?

- Health care workers who get vaccinated help to reduce the following:
 - transmission of influenza
 - staff illness and absenteeism
 - influenza-related illness and death, especially among people at increased risk for severe influenza illness
- Higher vaccination levels among staff have been associated with a lower risk of nosocomial (hospital-acquired) influenza cases.
- Influenza outbreaks in hospitals and long-term care facilities have been attributed to low influenza vaccination coverage among health care workers in those facilities.
- Higher influenza vaccination levels among health care workers can reduce influenza-related illness, and even deaths, in settings like nursing homes.

D. Pr	D. Program Evaluation		2	1	4
1.	Select validated program evaluation tools				
2	 Assess program processes e.g., adherence (e.g., attendance, diary completion) of participant the influence of the program on participants' knowledge, skills, and / or attitudes (e.g., confidence, outcome expectations) procedure and task implementation 				
3	 Assess program outcomes e.g., key outcomes (e.g., quality-of-life, functional status, asthma control, healthcare utilization, participant satisfaction) measures for key program outcomes program effectiveness 				
4	Use findings to assess program impact and need for modifications				

Program Evaluation

Program evaluation

Process evaluation vs. outcome evaluation

Program Evaluation

Program evaluation Processes

adherence of participant to the asthma management plan

procedure and task implementation by the asthma team

the influence on participants' knowledge, skills, and / or attitudes

Program evaluation Outcomes

- quality-of-life
- functional status
- asthma control
- healthcare utilization
- participant satisfaction

Program evaluation Select validated tools

3/10/2017

Juniper QOL surveys St. George Respiratory Questionnaire

Spirometry, pulmonary mechanics, work days or school days missed Observations: Observer's role, protocol, taking notes, observer comments, field notes, observer skills

Interviews: Structured, semistructured, unstructured, focus groups

Establishing/re-establishing the aim Determining who will do what, when, where, and why A needs assessment might be needed to re-establish the aim

Involves executing the plan for change Assess the implementation of the plan for change

This the analysis part of the cycle Are observed outcomes congruent with desired outcomes A process and/or outcome evaluation can be used here

The CQI team determines what needs to be changed The cycle is then repeated over and over

Program Development, Implementation, and Evaluation
